

DIGITAL LITERACY PROJECT REPORT

Name:ADHITHI.P.K

Reg No:25BSA10074

Branch:CSE(CLOUD COMPUTING AND
AUTOMATION)

Year:2025-29

Course Code:CSE0001

Date:31-03-2026

INTRODUCTION

Digital literacy is an essential skill in today's technology-driven world. It refers to the ability to use digital tools effectively, safely, and responsibly. As a Student Digital Ambassador, this project helped me understand the importance of digital awareness, online safety, and professional communication. Through different tasks, I explored various platforms, created digital content, and learned how to maintain a positive online presence. This project also improved my understanding of cyber threats and how to avoid them. Overall, it provided practical knowledge that will help me in academics, career development, and responsible digital behavior.

Task 1: Infographic

For this task, I created a digital literacy awareness infographic using Canva. The infographic included key topics such as the meaning of digital literacy, safe internet practices, and the importance of maintaining a professional online presence. I used simple visuals, icons, and short text to make the content easy to understand and visually appealing.

The design focused on educating students about using strong passwords, avoiding suspicious links, and thinking before posting online. It also highlighted how platforms like LinkedIn and GitHub can help build a professional identity.

One challenge I faced was selecting the right design elements and arranging the information clearly within one page. However, using Canva templates made the process easier. This task helped me understand how visual communication can be used to spread awareness actively.

Task 2: Digital Portfolio

In this task, I created and updated my profiles on GitHub, LinkedIn, and one additional platform. On GitHub, I set up my profile and created a README file including my basic details and learning goals. On LinkedIn, I added my education details and created a professional profile for future opportunities.

These platforms are important for students as they help in building a strong digital presence. GitHub is used to showcase technical work and projects, while LinkedIn is used for professional networking and career opportunities.

In the next four years, I plan to use these platforms actively by uploading projects, improving my skills, and connecting with professionals. This task helped me understand the importance of maintaining a clean and professional online profile.

Task 3: Platforms

For this task, I explored both coding and collaboration platforms. I created an account on HackerRank and completed a beginner-level problem, which helped me understand basic coding practice. It also improved my confidence in problem-solving.

In the second part, I created a Google Form as a Digital Literacy Awareness Quiz. The form included five questions related to digital safety and online behavior. I also linked the responses to a Google Sheet, which allowed me to view and analyze the responses easily.

This task showed how digital tools can be used for learning and collaboration. Coding platforms help in skill development, while tools like Google Forms make it easy to collect and manage information. These tools will be very useful for my academic work and future projects.

Task 4: Email Etiquette

In this task, I wrote two professional emails—one requesting an assignment extension and another applying for an internship. I learned the importance of including a proper subject line, greeting, structured content, and a polite closing.

I also created a social media do's and don'ts checklist, which highlighted responsible online behavior. Poor digital communication can create misunderstandings and leave a negative impression. For example, sending an unstructured or rude email to a professor can affect how they perceive the student. This task helped me understand that professional communication is very important in academic and professional environments.

Task 5: Cybercrime

In this task, I studied phishing as a type of cybercrime. I learned how attackers trick users into sharing sensitive information by creating fake emails or websites. While researching, I was surprised to see how easily people fall for such scams due to urgency and lack of verification.

I also created a prevention checklist, including tips like avoiding suspicious links, using strong passwords, and enabling two-factor authentication. I realized that awareness alone is not enough; safe behavior is equally important. After this task, I will be more careful while clicking links and sharing personal information online.

Conclusion

This project helped me understand the importance of digital literacy in today's world. I learned how to use digital tools effectively, communicate professionally, and stay safe online. It also taught me the value of maintaining a responsible digital presence. Through practical tasks, I gained hands-on experience with various platforms and improved my awareness of cyber risks. Overall, this project was very informative and useful for my academic and personal growth. I will apply these learnings in my daily digital activities and continue to improve my skills.
